The B-29, it was disclosed for the first time, is a heavily armored ship whose bomb load, range and ceiling exceed that of any other plane. It is powered by four engines of 2,000 horsepower each, each carrying two superchargers. It's wing span is 141.2 feet, as compared with the B-17's (Flying Fortress) span of 104 feet.

**Speeds Up Action** But Arnold said in connection with the announcement:

"This employment of the B-29 makes possible the softening up at- tack on Japan very much earlier than would be possible with aircraft hitherto known to combat."

Arnold asserted: "The Super Fortress is not going to win the war by itself, nor has anyone thought it will do so. It will, however, like its predecessors, the B-17 and B-24, strike at the sources of enemy strength, and prepare the way for ultimate decision by our well-established team of land, sea and air forces.

**Change in Distance**

"In our new strategic thinking, the B-17 and the B-24 will now become medium instead of long range bombers, and our B-25 and B-26 aircraft will become short range bombers. These smaller planes will travel no less distances than they do now, but the B-29 will attack much greater distance and with more power.

"The employment of the B-29 is just beginning. It goes directly into See—JAPAN—Page 9
